## Foreign Trade Information

Apart from the Public Administration, the Chambers of Commerce are the organisations that dedicate the most resources to promoting the internationalisation of Spanish companies.

The Chambers of Commerce, along with the State Agency of Tributary Administration (AEAT) have launched two *online* databases:

- **Directory of Spanish Export and Import Companies:** Lists Spanish firms that buy and sell abroad.
- **Foreign Spanish Trade Database:** Information on foreign trade operations, broken down by product, country and province.

This information is constantly being updated and is available at: [www.camaras.org](http://www.camaras.org)

# [Directory of Spanish Export and Import Companies]

It is now possible to find out *online* which companies export or import a specific product through the **Directory of Spanish Export and Import Companies**.

This is a tool that shows where the company has an international presence and the countries with which it has established trade relations.

The objective is to present export/import companies through a tool that promotes international trade and builds business relationships.

The Directory is an essential source of information for any company seeking to start out in international trade.

## What information does it provide?

The user can find:

- Name of the company
- Address
- Contact information: phone numbers, e-mail, web
- Export/import segment
- Year of trade abroad
- Countries of origin/destination for their imports/exports
- Products traded (broken down into 8 digits)

The official data gathered by the Chambers of Commerce and the State Agency of Tributary Administration may be added to and updated by the companies themselves. Information provided on the Internet site is free of charge.

## How to join in?

The Directory includes all companies that have given their express authorisation to be listed in it. To do so, they must complete the questionnaire available on the Directory web site [www.camaras.org](http://www.camaras.org) or from the State Agency of Tributary Administration at [www.aeat.es](http://www.aeat.es).

The companies may register, cancel or update the data displayed in the Directory at any time and always without charge.

Find out the Spanish companies that export and import, their products and their destinations

# [Foreign Spanish Trade Database]

The **Foreign Spanish Trade Database** offers updated information on international operations from Spain.

The user can find statistics on Spanish commercial transactions free of charge, from tonnes transported or types of merchandise to number of operations to a particular destination. All of this data is broken down by provinces.

The database is updated monthly, therefore provides access to the latest information available on Spanish foreign trade.

The update service provides the possibility of informing the user by e-mail every time new information is added to the database.

## What information does it provide?

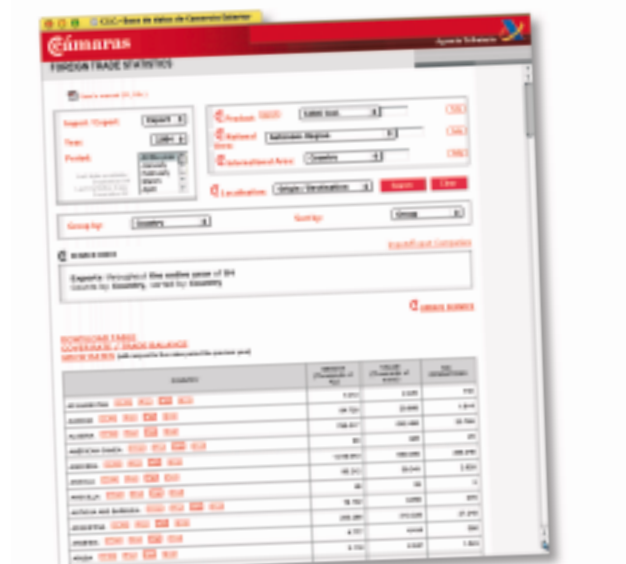

The information obtained from the official customs data is provided according to the user's preferences, based on a series of fields:

- Flows: imports or exports
- Period: year and specific month or aggregated interval of several months
- Product: approximately 9,000 possible items traded
- Spain and details by autonomous region or province
- Country, continent or economic area where trade is conducted

The data can refer to the origin or destination of the operations, legal address of the company or a combination of both.

The information is grouped by several criteria, providing the possibility for derivative statistics: coverage rate, trade balance or inter-annual variation rate, among others.

The data can be downloaded in a text format compatible with spreadsheet programs.

The Database offers updated information on the evolution of foreign Spanish trade
